

ChinaAMC Global Investment Grade Bond Fund

Fund Factsheet

As of 31 Oct 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Fund may go up as well as down. Past performance is not indicative of future results. The value of the Fund can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Global Investment Grade Bond Fund (the "Fund") seeks to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.
- The Fund's investment may be denominated and a unit class may be designated in a currency other than its base currency. The NAV of the Fund may be affected unfavourably by exchange rates and by changes in exchange rate control.
- Investment in debt instruments involves credit/counterparty risk, interest rate risk, volatility and liquidity risk, credit/downgrading risk, sovereign debt risk, valuation risk, credit rating risk, credit rating agency risk and risks associated with collateralized and/or securities products.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity. Convertibles will be exposed to equity movement and greater volatility than straight bond investments.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- The Fund may enter into sale and repurchase transactions and may suffer loss in the event of counterparty's failure.
- Investment in emerging markets (including the PRC) may involve increased risks and special considerations, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and high volatility.
- The Fund's investment may be concentrated in a jurisdiction or region. The value of the Fund may be more volatile than that of a fund having a more diverse portfolio of investments.
- The Fund may acquire FDIs for hedging purpose, which involves volatility risk, credit risk, liquidity risk, management risk, valuation risk, counterparty risk and OTC transaction risk. In adverse situations, such hedging may become ineffective and/or cause the Fund to suffer significant loss.
- There is no guarantee that the hedging instruments will be available or the hedging techniques will be effective for a hedged class. Hedging can limit potential gains of a hedged class.
- RMB is not freely convertible and is subject to exchange controls and restrictions. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to those original investments. Any such distributions may result in an immediate reduction of the NAV per Share of the Fund.

▲ Investment Objective

The investment objective of the Fund is to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.

▲ Manager's Comment

In October, US bond rates surged significantly above 4.3% due to the combined effects of trade tensions under the Trump administration and growing expectations of the US economy not experiencing a soft landing. The 10-year rate once again surpassed the 4.3% mark. The market reevaluated the Fed's rate-cutting trajectory following non-farm payroll data that greatly exceeded expectations. The increased likelihood of Trump's reelection made investors apprehensive about long-term bond supply and the risk of re-inflation, bolstering the performance of risk assets while dampening that of rate bonds. Driven by technical factors and fund allocations, credit bonds outperformed rate bonds, with credit spreads hitting new lows for the year in the middle of the month. However, influenced by rates, the Bloomberg Global Investment-Grade Bond Index dropped by 3.35% for October. The portfolio maintains control over credit risk through global diversification and higher ratings. It dynamically adjusts its duration to capture investment opportunities in credit bonds amid a background of rate cuts.
