

ChinaAMC New Horizon China A Share Fund*

Fund Factsheet | As of 31 Mar 2025

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund invests primarily in China A-Shares listed on SSE and SZSE through the QFI status granted to the Investment Manager and through Stock Connect.
- Investment in equity securities is subject to market risk and the prices of such securities may be volatile.
- Investing in the PRC, involves risks associated with emerging market, with greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risks.
- The Fund is subject to risks relating to the QFI regime, such as change of rules and regulations, default in execution or settlement of transaction by a PRC broker or the PRC Custodian and repatriation restrictions.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of programme.
- Investment in Mainland China debt securities involves volatility and liquidity risks, credit/counterparty risk, interest rate risk, credit rating and downgrading risk, credit rating agency risk, and valuation risk.
- The Fund may acquire FDIs for investment and/or hedging purposes. Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. Exposure to FDI may lead to a high risk of significant loss by the Fund.
- The Fund will hold investments denominated in currencies different to the base currency, meaning the Fund will be at risk to adverse movements in the foreign currency rates. RMB is currently not freely convertible and is subject to exchange controls and restrictions. A non-RMB based investors in units are exposed to foreign exchange risk.

▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by investing primarily in onshore RMB denominated equity securities issued by issuers based in, or having a significant exposure to, Mainland China and Hong Kong, as further described below. The Investment Manager contemplates investing directly into China A-Shares using its QFI status and the Stock Connect. As at the date of the Fund's prospectus, the Investment Manager, when using Stock Connect, will be limited to investments in China A-Shares listed on the SSE and the SZSE.

▲ Manager's Comment

In March 2025, the Wind All Share Index fell by 0.4%, the CSI 300 Index by 0.07%, the ChiNext Index by 3.07%, while the Hang Seng Index rose by 0.78% and the Hang Seng Tech Index fell by 3.11%. The performance of the US indices, including the Dow Jones, S&P 500, and Nasdaq, were -4.2%, -5.75%, and -3.97%, respectively. The Chinese stock market continued to outperform the US stock market, while the Hong Kong stock market slightly outperformed the A-shares. However, the technology sector represented by the Hang Seng Tech Index was not as strong as in the previous two months. In terms of industry sectors, energy, materials, utilities, consumer, and pharmaceuticals outperformed, while real estate, information technology, and communication services underperformed.

In March, the A-shares experienced a slight decline, with the first half of the month seeing a volatile upward trend and the second half experiencing a volatile adjustment. The market maintained a daily turnover of over 1 trillion RMB, and the China Purchasing Managers' Index (PMI) continued to stay in the expansion zone. The Two Sessions held in the first half of March, although the policies were generally in line with market expectations, emphasized timely and sufficient policies and a positive tone to guide market optimism about subsequent economic recovery. The trend and enthusiasm for IPOs in Hong Kong continued to strengthen, with some newly listed IPO stocks performing well, driving the market's volatile upward trend in the first half of March. However, large-scale corporate financing began to appear, with BYD, Xiaomi, and NIO raising 43.5 billion, 42.6 billion, and 4 billion HKD respectively in March, raising concerns about the adjustment of technology stocks and stocks that had risen significantly earlier. Industry performance began to diverge. Additionally, global trade tensions started to escalate, with the US imposing a 25% tariff on European steel and aluminum in mid-March, and the EU announcing phased retaliatory tariffs on US goods worth 26 billion euros on the same day. The US President's declaration of the "reciprocal tariff" policy to be implemented in April also increased market concerns, leading to continued market adjustments in the second half of the month.

Looking ahead, we still believe that the core issue of the Chinese stock market is the recovery of China's economy itself, with geopolitical and international monetary environment having marginal impacts that will not significantly affect the direction of the Chinese market. If the external environment deteriorates suddenly, the Chinese government may strengthen domestic demand policies and use policy tools to stabilize the market. In the current environment, our view on Chinese assets has changed, and policies will support the economy; we expect moderate economic recovery, which will support the market upward, and buying opportunities will arise once external events stabilize. In the short term, we will respond to market uncertainties and start more actively selecting stocks amid volatility, with a particular focus on the pharmaceutical, technology, and manufacturing sectors.
