

ChinaAMC Select RMB Bond Fund

Fund Factsheet

As of 31 May 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select RMB Bond Fund (the "Fund"), through the RQFII quota obtained by the Manager, invests primarily in RMB denominated fixed income securities issued or distributed in the PRC and may invest a small portion of its assets in PRC A-Shares.
- The Fund is subject to regulations which regulate investments by RQFIIs in the PRC which have just been announced and novel in nature. Any uncertainty and change to the relevant laws and regulations (such as PRC tax laws and repatriation policy) in the PRC may adversely impact the Fund.
- Investment in single country (the PRC) markets involves concentration and other risks not typically associated with investment in more developed economies or markets.
- Investment in RMB debt instruments in the PRC involves liquidity risk, credit risk, credit rating risk and downgrade risk. There may not be a liquid or active market for such RMB debt instruments; the Fund may also be exposed to credit/insolvency risk of issuers of the debt securities. As the credit ratings of the debt instruments of the Fund are largely assigned by the credit agencies in the PRC, the methodologies adopted by such local rating agencies may not be consistent with the international rating agencies. In the event of downgrading in the credit ratings of a debt instrument or its issuer, the Fund's investment value in such security may be adversely affected.
- Investment in the Fund is subject to interest rate risk. Change of macro-economic policies in the PRC such as monetary and fiscal policy may cause changes to market interest rates, affecting the pricing of bonds and thus the return of the Fund.
- The Fund is denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. HKD Investors may suffer a loss if RMB depreciates against HKD or such other currencies.

▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by principally (i.e. up to 100% of its net assets) investing in (i) RMB denominated fixed income instruments, including bonds, issued or distributed within the PRC which (a) are denominated and settled in RMB and (b) are traded on the interbank bond market or are traded or transferred on the exchange market in the PRC, and (ii) fixed income funds (including money market funds) approved by the China Securities Regulatory Commission ("CSRC") and offered to the public in the PRC*.

* Investment in fixed income funds approved by the CSRC which are offered to the public in the PRC will not exceed 10% of the net asset value of the Fund.

¹Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. The investment returns are denominated in RMB. US/HK dollar-based investors are therefore exposed to fluctuations in the US/HK dollar/RMB exchange rate. With effect from 9 February 2018, the investment strategy of the Fund was changed. Performance information prior to 9 February 2018 was achieved under circumstances that no longer apply. The investment objective of the Fund has also been changed on 11 April 2014.

²Please refer to the Fund's Explanatory Memorandum for further details (including fees).

³Calculated since the relevant inception date of the respective share class.

ChinaAMC Select RMB Bond Fund

Fund Factsheet

▲ Manager's Comment

The Chinese economy is now under a two-speed growth model, as some market observers call it. Exports and export-oriented manufacturing capex are on the strong track, while domestic consumption and property are on the weak track. This is manifested by the divergence between the recent official manufacturing PMI and Caixin manufacturing PMI readings. The official manufacturing PMI is based on a sample set tilted towards large-sized businesses across broader geographic regions, while the Caixin has a sample set mainly located in coastal provinces and with smaller sizes. As a result of the different samples being used, official manufacturing PMI tends to capture more of the status of the domestic market, and Caixin manufacturing PMI reflects more of the external demands for Chinese products. With this in mind, it's possible to reconcile various economic data into a holistic picture. Exports remain the bright spot of the Chinese economy. At the same time, policy pivots in May to reduce the tail risk of the property sector as the government surfaces as the potential buyer of last resort in the property market. Although the outlook has changed for the better, new home sales have yet to respond because it now takes more than a policy pivot to convince homebuyers, who carry a lot of worries on their minds, such as falling home prices, a weak income outlook, looming property taxes, etc. There will be more follow-up policy stimulus if the current policy fails to lure buyers back to the property market.

The PBoC escalates its fight against bond investors's frenzy for long-term government bonds by saying that it may sell bonds to cool down the market. What worries policymakers is the interest rate risk, which will rise once the dominant narrative shifts from deflation to reflation. As of May 31, China's 10-year treasury yields fell to 2.30% and 30-year yields to 2.55%, even though the nominal GDP still grew 4.2% yoy in 1Q24. It appears that PBoC is not on the same page as the market that holds the deflation view. If history is any indication, bond yields only turn up when economic growth is on firm footing. Right now, it's not the time to worry about rising yields in China, and it seems the PBoC has some heavy lifting to do next.

▲ Portfolio Allocation

Sector Exposure (%)

Weighted Avg Duration	1.83 Years
Weighted Avg Credit Ratings	AA+
Weighted Avg Yield to Maturity ¹	2.74%

Credit Products include Medium Term Notes, Convertible Bonds, Corporate Bonds, Enterprise Bonds.

Data Source: Wind. Rating agencies include Dagong, China Lianhe, Pengyuan, CCXI, CCXR, Shanghai Brilliance, China LianHe. Data As of 31 May 2024

▲ Latest Fund Distribution

Class	Ex-dividend Date	Distribution	Annualized Dividend Yield
Class A-DIST-RMB	30/5/2024	RMB 0.03	4.44%
Class A-DIST-USD	30/5/2024	USD 0.03	5.53%

Dividend is not guaranteed and may be paid out of capital or effectively paid out of capital.

Annualized Dividend Yield = $[(1 + \text{distribution per unit} / \text{ex-dividend NAV})^{12}] - 1$. The annualized dividend yield is calculated based on the latest dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield. Positive distribution yield does not imply positive return.

Data source: Bloomberg. As of 31 May 2024.

¹ Calculated with the weighted average of median yield to maturity of each holding.
