

# ChinaAMC Select Greater China Technology Fund\*

## Fund Factsheet

As of 31 May 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

### ▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

## Fund Factsheet

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

The Hang Seng Tech Index experienced a slight decline of 0.27% in May. During the first half of the month, the market continued the upward trend from April, with overall positive investor sentiment and the release of policies focused on stable economic growth. On May 17th, the central bank successively announced measures such as lowering the down payment ratio, removing the lower limit on commercial loan interest rates, reducing housing provident fund loan rates, and establishing a 300 billion yuan policy for re-lending in support of affordable housing. As a result, there was significant activity in property transactions in major first-tier cities during the first weekend after the implementation of the new real estate policies.

However, China's macroeconomic data for April showed a lackluster performance, with credit data falling well below expectations. Some investors chose to take profits after the market had experienced a significant short-term rise, and geopolitical risks also intensified, leading to a rapid market downturn in late May. On May 29th, the State Council issued the "2024-2025 Energy Conservation and Carbon Reduction Action Plan," emphasizing the control of fossil fuel consumption, strengthening carbon emission intensity management, gradually lifting restrictions on the purchase of new energy vehicles in various regions, strict control of the addition of smelting capacity for copper and alumina, increased development of non-fossil energy sources, and deepening reforms in the pricing of renewable energy.

On May 30th, the Financial Times published an article stating that China's financial data for May would continue to be influenced by the development of direct financing and the withdrawal of liquidity by banks. In May, the performance of the fund slightly outperformed the Hang Seng Tech Index. The fund achieved positive excess returns in sectors such as healthcare, industry, utilities, and materials in terms of industry allocation and stock selection in the consumer discretionary sector. However, negative excess returns were recorded in the information technology and real estate sectors in terms of industry allocation and stock selection in the information technology and communication services sectors. The fund will continue to adhere to a prudent and sustainable investment philosophy, striving for good long-term performance through reasonable industry allocation and bottom-up stock selection.

Looking ahead, the fund manager maintains a positive outlook on the market's medium to long-term performance. After the correction since late May, investor sentiment has become more subdued. Short-term funds, represented by hedge funds, have taken profits during this correction, while long-only funds have slowed down in replenishing their positions in Chinese stocks. The recovery of China's macroeconomy still needs to be strengthened, as some high-frequency data since April have shown signs of weakening. The overall economy and financial markets in China are still in a state of weak reality and high expectations. Continued implementation of policies to maintain stable economic growth and investor expectations for future policies are the main factors supporting the stock market. In the short term, the market is expected to trade within a range, and the fund manager will actively seize investment opportunities at the individual stock level. The fund will continue to adopt a relatively proactive investment strategy, while strengthening the grasp of alpha opportunities at the stock level in a complex market environment, enhancing the diversity and stability of portfolio investment returns.
