

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

▲ Manager's Comment

The Hang Seng Tech Index rose by 2.63% in December. In the first half of the month, investors speculated on fiscal policy expectations, while in the second half, the market experienced fluctuations and declined. On December 6, Premier Li Qiang of the State Council chaired an executive meeting to listen to a comprehensive inspection report on promoting high-quality development and striving to achieve the annual economic and social development goals. On December 9, the Politburo meeting emphasized stabilizing the property and stock markets and strengthening extraordinary counter-cyclical adjustments. The Central Economic Work Conference held on December 11-12 mentioned that fiscal policy would expand the deficit, issue additional special treasury bonds, adjust the reserve requirement ratio and interest rates in a timely manner, strengthen and expand policies to expand domestic demand, and implement two new policies to increase the income and social security of low-income groups. On December 16, the executive meeting of the State Council pointed out the need to expand the scope of local government special bonds used as project capital and appropriately increase the autonomy and flexibility of local governments.

Looking ahead, the fund manager maintains a positive view on the market's medium- to long-term performance, but acknowledges an increase in short-term external uncertainties. In 2024, China's economic recovery fell short of expectations, with weak domestic demand leading to most companies' profit growth falling below expectations, putting pressure on stock price trends. However, the trend of China's monetary and fiscal policies taking effect has emerged. With the introduction of more positive policies and the emergence of economic growth and policy signals, significant improvements are expected. In 2024, the trade-in policy significantly boosted sales of home appliances and automobiles. In 2025, the scale and scope of the trade-in policy are expected to further expand. Subsequent attention will focus on the intensity and pace of fiscal policy efforts and whether they can substantially improve residents' income expectations and consumption propensity to stimulate the economy's endogenous growth momentum. The continuous inflow of southbound funds into the Hong Kong stock market and the increase in dividend payouts and repurchase amounts by a large number of Hong Kong-listed companies to enhance shareholder returns will also help the valuation centrality of the Hong Kong stock market in the medium to long term. Additionally, more high-quality and cutting-edge companies listing on the Hong Kong stock market will bring more investment opportunities. Leading companies such as Jiangsu Hengrui Medicine, Contemporary Amperex Technology, and Dongpeng Beverage have recently announced plans to list on the Hong Kong stock market, which is expected to improve market liquidity and attract more potential investors. With the emergence of more internal positive factors, overseas funds are also expected to increase their allocation to the Hong Kong stock market, bringing in more incremental funds. However, in the short term, attention needs to be paid to the tariff and geopolitical risks following Trump's election as President of the United States and their impact on the Chinese economy and financial markets. The fund will continue to adopt a relatively proactive investment strategy, while continuing to enhance the capture of alpha opportunities at the stock level in the complex market environment, improving the diversity and stability of portfolio investment returns.
